

Indian Restaurant

In Japan, India is widely recognized as the birthplace of curry. Indian cuisine is familiar to many.

Japanese love Indian food and will go out for Indian restaurants for a variety of occasions. There are also many curry chain restaurants in Japan.

Indian restaurants have been increasing in number since the 1990's bringing popularity to Indian-style curry.

The spices used extensively in Indian cuisine have gotten attention in recent years for their effects on

health and beauty, causing a further spike in popularity.

One of the reasons why there are many Indian restaurants is that many people from India live in Japan, more than 30,000, especially in Tokyo area where you can find numerous Indian restaurants.

Another reason is that some Japanese people came to love Indian cuisine after they traveled to India or took lessons in Yoga, they say. They want to savor authentic Indian cuisine.

There are three Indian restaurants in our neighborhood. Some of our staff have been to one of them named "Kamadhenu", a few blocks away from our office.

This restaurant has a nice atmosphere, and their staff are very cheerful and friendly. Of course, the food is very good. From time to time, they have a dance party with people from India.

Curry and Rice

Curry was introduced by the British in 1860s. Later, unique Japanese recipes were created. They are different from authentic Indian curry.

Main ingredients are some meat, potatoes, onions, carrots and curry roux. The sauce is thick and rich, which is the best way to eat with Japanese rice.

They say that Japanese eat 48.6 plates of curry a year per person according to the estimation of National Curry Manufacturers Association.

Curry is the most popular meal among children, according to national rankings, and ranked 4th in favorite foods after sushi, sashimi and yakiniku (grilled meat).

Products

Power-Lock[®] - locking device

Manufacturer: Tsubakimoto chain Co.

- * Model: KE Series standard
- * Suit a wide range of shaft tolerances
- * Accommodate plus shaft tolerances of servomotors, etc.
- * Excellent for locking small shafts
- * Allows for more compact design, with the smaller difference between the inner and outer diameters

- * Shaft Diameter Range: 5φ ~ 100φ
- * RoHS compliant
